

Figure 1

Figure 1 consists of two side-by-side bar charts, labeled (a) and (b). Both charts have a vertical axis representing 'Number of cases' ranging from 0 to 60 in increments of 10. The horizontal axis represents 'Year' from 1987 to 1997.

(a) This chart shows the number of cases for 'All cases'. The bars show a general upward trend over time, starting at approximately 10 cases in 1987 and reaching about 55 cases by 1997.

(b) This chart shows the number of cases for 'Cases due to *S. flexneri*'. The bars are generally lower than those in chart (a), starting around 5 cases in 1987 and peaking at approximately 25 cases in 1995 before declining to about 15 cases in 1997.
